his most loyal and devoted subject.

THE COMPILER.

PREFACE

With the spread of literature among the people, every thing seems to be much in demand, and attempts are being made to supply these demands in a greater or less degree. Some wants are such as are at once supplied, whereas it often happens that other more important remain totally unsupplied. This and also the opinion of Mr. H. D. Rendall, I. C. S., Judicial Assistant to the Agent to the Governor in Kathiawar who says " I do not know of any such separate * * * publication in English useful to the Bench and the Bar, " have led me to publish this book.

This calendar is for hundred years from 1845 to 1944 A. D. and contains the more important 11 eras now prevalent in India *Viz.*, the Christian, Samvat, Saka, Bengali, Mulki, Muggee, Burmese (the Prome era) Yazdejardi (Shâhinshâhi), Fasli (of Northern India), Nauroz and Hijri.

The Samvat is used in two ways. In Northern India *i. e.* north of the Narmada, it is used with the luni-solar year beginning with Chaitra and Pûrnimânta months. In Gujarat and Kathiawad it is used with the same year and Amânta months beginning with Kârtika. In order to facilitate reference both these are given in different columns.

The Saka is generally used in Southern India with the luni-solar year beginning with Chaitra and Amânta months but in Bengal with the solar year beginning with Mesha. These two are also shown in different columns.

In the Deccan the name of the Samvatsara is usually written along with the number of the year, especially in legal documents. I have, therefore, shown the name of the Samvatsara where the year changes in the fourth column in the line of the month. Besides this a table of the sixty year cycle current in Southern India is also given with corresponding Saka years from 1729 to 1908.

In the Christian calendar the feasts are divided into immoveable which fall on fixed dates every year, and moveable feasts which for the most part depend on Easter day. Therefore a table of Easter Sundays from 1845 to 1945 A. D. is given for reference.

The Parsis add 5 days called Gathas to their twelfth or last month. To help the reader to distinguish these at first sight, they are printed in Roman figures.

Calendars are very useful to the bench and the bar for finding out past dates in documents. There is a time limit of three, five and twelve years for Civil Suits according to the Limitation Act, and most of the cases are covered by the above limit, but in some cases the limit is of 30 and 60 years. Mr. Krishnalal Mohanlal Jhaveri, M.A., L.L.B., Judge of the Small Causes Court at Bombay is of opinion that the greater the number of past years, the more useful the calendar will be. Hence 68 past years are given. Mr. C. E. Palmer, I. C. S. says "I think your calendar will prove most useful and I have no alterations to suggest."

In every school the birth dates of boys of every nationality which are usually given in their respective calendars have to be rendered into the Christian. As for example if the boy is a Hindu, a Hindu date is given and if he be a Mahomedan, a date with the Hijree era is supplied, and it is difficult for the teacher to find out the Christian date corresponding with the date supplied. This Calendar will remove the difficulty. Rev. F. Dreckmann, S. J., Principal, St. Xavier's College, Bombay says "I consider the publication of your calendar to be a very useful undertaking * * * I asked some of my Indian friends for their opinion and they all agreed with me."

In short this Calendar will serve as a useful reference book to all in a greater or less degree. Mr. C. W. Waddington, M. A., C. I. E., Principal, Mayo College, Ajmer says " The calendar which you intend to publish seems to me to be a useful reference book."

Here I must not forget to express my deep sense of indebtedness to Mr. **M. P. Khareghat**, I. C. S. (Retd.) who with his ever obliging nature readily acceded to my request and contributed an able and exhaustive introduction. It treats of the structure, origin, eras, holidays, and other details of the Hindu, Parsi, Mahomedan and Christian Calendars, thereby adding so much to the usefulness of the book.

I am also thankful to the gentlemen who were pleased to favour me with their valuable opinions about this Calendar when I circulated the specimen pages among them before printing it. I have also to apologize to the public for publishing this book long after it was advertised owing to unavoidable circumstances.

LIMBDI, KATHIAWAR,
1st October 1912.

INTRODUCTION.

THE HINDU CALENDAR.

General nature.

1. A calendar is a system of distributing time into periods adapted for the purposes of religion or civil life. The modern Hindu Calendar is not one such system, but a number of them having certain common principles. The natural day, its divisions, and the week of seven days are elements common to all the systems. Elements. The Cycle of sixty years is connected with the motion of the planet Jupiter. The other elements depend solely on the motion of the sun or on the combined motions of the sun and moon. The systems Solar and Luni-Solar Calendars. which consist of the former kind of elements are called solar and of the latter kind luni-solar. Varieties of the solar calendar are used for civil purposes by the Hindus in Bengal, Orissa, the Tamil and Malayalam countries. Varieties of the luni-solar calendar are Their uses. used in the same places for religious and domestic purposes and by the Hindus in the rest of India for all purposes. The calendars for each year according to various systems are published at many Panchângas. places in India in almanacs called Panchângas (five-limbed). They are called so because they contain for each day the five elements of time *viz*:—the week-day (Vâra), Tithi, Nakshatra, Yoga, and Karana terms explained later.

Authorities.

2. Hindu astronomers are agreed as to the general nature of the Ancient Works motions of the sun and moon, but differ as to details, there being three chief schools based on the three Siddhântas (astronomical Siddhântas works) called the Sûrya, Arya, and Brahma respectively. The author of the first is unknown, and so is the date of its composition. but it existed in an older form in the sixth century, and its present form may date from about 1000 A. D. The Arya is of 499 A. D. composed by Aryabhata. The Brahma is of 628 A. D. composed by Brahmagupta. Modern Hindu almanacs are usually compiled from later works called Karanas which contain methods of calculation Karanas. easier than those of the Siddhântas, and corrections (Bija) in the positions and motions of the heavenly bodies, shown to be necessary by

flux of time. The chief Karanas based on the Sûrya S. are the Graha Lâghava, the Brihat and Laghu Tithi-chintamani, the Makaranda, and the works of Vâvilâla Kochchanna. The Graha Laghava and two Tithi-chintamanies were composed by Ganesh Daivajnya the first in 1520 A. D., and the latter two in 1525 A. D. They are used by almanac makers wherever the Marathi language is spoken *i. e.* the greater part of Western India, the Berars, and Central Provinces, and also in the Canarese country, Mysore, Hydrabad and parts of Gujarat. The Makaranda composed in 1478 A. D. is used extensively in Northern India. Vâvilâlas work composed in 1298 A. D. is used in the Telugu country for the luni-solar calendar. The Surya S. is also the basis of calculation in Bengal, and thus this school is followed through the greater part of India. The Vâkya Karana based on the Arya S is followed for the solar calendar in the Tamil and Malayalam countries. The Râja-Mrigânka composed by Bhoja in 1042 A. D. or some similar work based on the Brahma S. is followed in parts of Gujarat and Rajputana.

Where prevalent.

Modern Works.

3. The best English works on this subject are Sewell and Dikshit's "The Indian Calendar" (1896) and Fleet's article on Hindu chronology in the Encyclopædia Brittanica (11th Ed). Warren's Kâla-Sankalita (1825) gives a good description of the calendars of Southern India, and Jervis's Weights and Measures of the Konkan (1832) of those of Western India. Other useful works are Prinsep's Useful Tables (1833-36), Cowasji Patel's Chronology (1866), Cunningham's Indian Eras (1883), Naidu and Sewell's South Indian Chronological Tables (1889), Girish Chandra's Chronological Tables (1894) and Jacobi's articles and tables in the Indian Antiquary (1888), and Epigraphia Indica (Vols. I & II). A great deal of original investigation on different points of the Hindu calendar and its history is contained in articles in the Indian Antiquary especially from 1887 to 1897. A very good account of the calendar and the modern attempts to improve it is contained in Dikshit's History of Hindu Astronomy in Marathi (1896).

The day and its divisions.

The Civil day.

4. The most ordinary measure of time among the Hindus as among other nations is the natural day. The civil day (Sâvana Divasa) is counted from sunrise to sunrise. Such a day varies slightly in

length through the year as the sun rises earlier or later. Its mean length is devided into 60 Ghatikâs (Ghatis, Dhandas, or Nadis) each Ghati into 60 Palas, each Pala into 60 Vipalas, each Vipala into 60 Vipratipalas, and so on. Thus a Ghati is equal to 24 minutes, a Pala to 24 seconds, a Vipala to 24 thirds and so on. Two Ghatis make a Muhûrta. Hindu astronomers reckon mean time from mean sunrise on the principal meridian (Madhya-Rekhâ) which passes through an imaginary spot on the Equator called Lankâ and the city of Ujjain. As the longitude of Ujjain is about 75°-45′ east of Greenwich, mean sunrise takes place there 56 minutes 56 seconds after midnight at Greenwich. A Hindu almanac usually reckons time from true sunrise at the place for which it is compiled proper corrections being made for longitude and latitude. Hence those compiled for different places vary even though the system of calculation be the same.

Its divisions.

The Principal meridian.

Time in Panchangas.

The Week.

5. The week of seven days was probably introduced into India from Western Asia some centuries after Christ, the first proved instance of the use of the name of a week-day being in an inscription of 484 A. D. It is now in use throughout India the days from Sunday being called respectively by the names of the Sun, Moon Mars, Mercury, Jupiter, Venus and Saturn coupled with the word Vâra. The following table shows the Sanskrit names and those commonly used in Gujarâti, Marâthi and Hindi.

When borrowed.

Name of days.

English.	Sanskrit.	Gujarati, Marathi and Hindi.
Sunday	Ravi-or Aditya Vâra	Ravi-Adit-Ait-or At-Vâr
Monday	Soma-Vâra	Somvâr
Tuesday	Mangala-Vâra	Mangalvâr
Wednesday	Budha-Vâra	Budhavâr
Thursday	Brihaspati or Guru Vâra	Brihaspat or Bhrespat or Guruvâr
Friday	Sukra-Vâra	Sukarvâr
Saturday	Sani or Manda-Vâra	Sani or Sun or Mandvâr or Sanichar (Hindi only)

Mohomedans talking Hindustani use the same names except that they always call Friday Juma, and Thursday Jumarât, and

sometimes call Monday Pir. The days from Sunday to Friday are often indicated by the numbers 1 to 6 and Saturday by 7 or 0 and the time of day from sunrise by adding to the number of the day, the Ghatis and Palas. Thus 6 Dy. 23 Gh. 20 Pl. means at 23 Ghatis 20 Palas after sunrise on Friday.

Number of days.

The Zodiac and Solar reckoning.

6. As the earth revolves round the sun in its orbit, the sun seems to go through what are called the fixed stars returning to the point among them from which is started in what is called a sidereal year. The length of that year according to the three Sidhântas and modern European reckoning is as follows; *viz*:—

The Sideral year

	Hindu Measures					European Measures			
	Dy.	Gh.	Pl.	Vp.	Prp.	Dy.	Hr.	Mt.	Sc.
Sûrya S.	365	15	31	31	24	365	6	12	36·56
Arya S.	365	15	31	15	0	365	6	12	30
Brahma S.	365	15	30	22	30	365	6	12	9
Modern European	365	15	22	53	15	365	6	9	9·3

7. The apparent path of the sun through the stars is called the ecliptic (Krânti-vritta). The stars along this path have been divided into twelve groups since very ancient times probably by the Babylonians. Each group is called a constellation or sidereal sign, and the twelve together form the Zodiac. This Babylonian Zodiac sometimes called solar was probably introduced into India some centuries after Christ through Greek channels. These sidereal signs called Râsis are considered to be equal in length and so each is of 30°. The Hindus place the commencement of the first Râsi Mesha (the ram) close to the star Revati identified with Zeta Piscium by modern authorities. The sun's entry into a sign is called Sankrânti and some Ghatis before and after a Sankrânti are considered holy when certain ceremonies are performed and gifts given. The period the sun stays in each sign is an astronomical solar month (Saura Mâsa), and is often called by the name of the sign. As the sun's motion is unequal being slowest when it is furthest from the earth or in apogee (Mandochcha), and fastest when nearest or in perigee, the solar months vary in length. The following table gives the Latin, English and Sanskrit names of the sidereal signs, and the period the sun passes in each according to the Sûrya and

The Ecliptic

The Sidereal signs or Râsis.

Astronomical. Solar Months.

Arya Siddhântas as correctly calculated by Dikshit and Sewell. The periods according to the Laghu Tithichintâmani as given by Jervis differ by less than half a Ghati from those of the Sûrya whereas those given by Warren as for the Sûrya S. differ by one or two Ghatis.

			Length of stay of the sun in each sign.					
Latin.	English.	Sanskrit.	According to the Surya S.			According to the Arya S.		
			Dy.	Gh.	Pl.	Dy.	Gh.	Pl.
Aries	Ram	Mesha	30	56	7	30	55	30
Taurus	Bull	Vrisha or Vrishabha	31	25	13	31	24	4
Gemini	Twins	Mithun	31	38	41	31	36	26
Cancern	Crab	Karka	31	28	31	31	28	4

Capricornus	Goat	Makara	29	26	53	29	27	24
Aquarius	Water bearer	Kumbha	29	49	13	29	48	30
Pisces	Fishes	Mina	30	21	12·5	30	20	19·2

8. In ancient times the inequality in the sun's motion was not known and so the mean motion alone was taken into account Later even when astronomers knew of the inequality for ease of calculation they conceived an imaginary body called the mean sun (Madhyama Ravi) travelling with the mean motion of the sun along the ecliptic and starting from the apogee at the same moment as the true sun (Spashta Ravi) Hindu astronomers hold that the mean sun was at the first point of Mesha at the beginning af the Kaliyuga on Friday 18th February 3102 B.C., according to the Arya S. at sunrise at Lanka, and according to the Sûrya S. six hours before *i. e.* at the preceeding midnight. The true sun enters Mesha 2 Dy. 10 Gh. 14 Pl. before the mean according to the Sûrya S; and 2 Dy. 8 Gh. 51 Pl. before according to the Arya S. For astronomical purposes the year usually begins with the entry of the mean sun into Aries, but for the purposes of religion and civil life regard is had to the true sun. This entry of the true sun (spashta Mesha-Sankrânti) takes place at present on the 11th or 12th of April. In the first year of these Tables *viz.* 1845 A. D. it took place on 11th April at 23 Gh. 20 Pl. after mean sunrise at Lanka according to the Sûrya S., and 17 Gh. 11 Pl. after according to the Arya.

Beginning of Year

9. The daily revolution of the earth from west to east on its

The celestial poles and equator.

axis passing through its poles, makes the celestial sphere appear to revolve from east to west on an axis passing through two points called its poles (Dhruva). The great circle midway between those celestial poles is the celestial equator (Vishuva-Vritta), just as the great circle midway between the earth's poles is the terestrial equator. All points on the celestial equator rise due east at every place on the earth, and are as long above the horizon as below it. The ecliptic cuts the equator at two opposite points and when the sun passes through these points of coincidence (Sampâta) it is as long above the horizon as below it, so that the day and night are equal. Hence these points are called the equinoxes one vernal *i.e.* of spring, and the other autumnal. In the sixth century after Christ the vernal equinox coincided with the first point of Mesha. But owing to a slow motion of the earth's equator, the celestial equator seems to slide back along the ecliptic about 50″ in a year and so the first point of Mesha is now about 19° east of the vernal equinox. This interval is called the precession of the equinoxes (Ayanâmsa). In European astronomy the space from one vernal equinox to another is divided into 12 equal parts of 30° each, and each is called a tropical sign, the names beginning with Aries being the same as those of the 12 constellations called for distinction sidereal signs. At present tropical Aries coincides nearly with the last 19° of sidereal Pisces and the first 11° of sidereal Aries and similar is the case with the other signs. The time the sun takes to travel from one vernal equinox to another is the tropical year, and it is shorter than the sidereal by about 20 minutes as the sun has to travel 50″ less; its present length is 365 Dy. 5 Hr. 48 Mt. 46 Sc The seasons return according to the tropical year and for this reason among others attempts have been recently made to induce the Hindus to adopt this year instead of the sidereal but without much success.

The Equinoxes

Precession.

Tropical Signs.

Tropical Years.

10. Long before the Hindus adopted the Babylonian or Solar Zodiac they had been using certain groups of stars or asterisms called Nakshatras to mark the course of the moon from day to day. The Nakshatras together are sametimes called the Lunar Zodiac. There are 28 Nakshatras and their chief stars called Yoga-târâs are at unequal intervals. But for ease of calculation the ecliptic has been divided into 27 equal parts each of 13°-20′, which are also called Nakshatras, and bear the names of the original Nakshatras or asterisms nearest to them. In this adaptation the name of the Nakshatra

The Lunar Zodiac.

Nakshatras.

Two Meanings of Nakshatras.

Abhijit has been dropped out. The word Nakshatra is now mostly used in this second sense. Hindu almanacs usually show for each day the Nakshatra in which the moon is at sunrise and the Ghatis and Palas after sunrise, when it will leave that Nakshtra for the next, this information being wanted for astrological and religious purposes. They also show from time to time the sun's entry into a new Nakshatra mostly for marking the seasons; thus at present the rains are supposed to begin in Western India when the sun enters Mrigasiras. The following table gives the names of the original 28 Nakshatras with the names of the chief stars as identified by Whitney. Only 27 of the names are numbered, they being those of the divisions of the ecliptic also called Nakshatras. Originally Krittikâ was the first Nakshatra, and it is still so for religious purposes, but for other purposes Asvini is first now and probably has been so since the adoption of the Babylonian Zodiac.

The first Nakshatra.

	Nakshatras.	Chief Stars.
1	Asvini	Beta of Aries
2	Bharani	35 of Aries
3	Krittikâ	Eta of Taurus or Pleiades
4	Rohini	Aldebaran
5	Mrigasiras or Agrahâyani	Lambda of Orion
6	Ardrâ	Alpha of Oriom
7	Punarvasu	Pollux
8	Pushya or Tishya	Delta of Cancer
9	Asleshâ	Epsilon of Hydra
10	Maghâ	Regulus
11	Purva-Phalguni	Delta of Leo
12	Uttara-Phalguni	Denebola
13	Hasta	Delta of Corvus
14	Chitrâ	Spica
15	Svâti	Arcturus
16	Vishâkhâ	24 of Libra
17	Anurâdhâ	Delta of Scorpio
18	Jyeshthâ	Antares
19	Mula	Lambda of Scorpio
20	Purvâ-shâdhâ	Delta of Sagittarius
21	Uttarâ-shâdhâ	Sigma of Sagittarius
	Abhijit	Vega
22	Sravana	Altair
23	Dhanishthâ or Sravishtha	Beta of Delphinum
24	Satabhishaj or Satatârakâ	Lambda of Aquarius
25	Purva-Bhâdrapada	Markab
26	Uttara-Bhâdrapada	Algenib or Alpherat
27	Revati	Zeta of Pisces

Yogas.

11. The sum of the Nakshatras of the sun and moon with their fractional parts is called Yoga, and when this sum exceeds 27 the excess only is taken. Thus if the sun's Nakshatra is 15·5 and that of the moon 14·2, the Yoga is 2·7 *i. e.* the third yoga is current, threes tenths of it having yet to elapse. The names of the 27 yogas are.

1.	Vishkambha	15.	Vajra
2.	Prîti	16.	Siddhi
3.	Ayushmat	17.	Vyatipâta
4.	Saubhâgya	18.	Varîyas
5.	Sobhana	19.	Parigha
6.	Atiganda	20.	Siva
7.	Sukarman	21.	Siddha
8.	Dhriti	22.	Sâdhya
9.	Sûla	23.	Subha
10.	Ganda	24.	Sukla
11.	Vriddhi	25.	Brahman
12.	Dhruva	26.	Indra
13.	Vyâghâta	27.	Vaidhriti
14.	Harshana		

Almanacs show the Yoga current at sunrise on each day, and the Ghatis and Palas after sunrise when it ends.

The Solar Calendar.

General Constitution.

12. In all varieties of the Hindu solar calendar the year consists of 365 or 366 whole days divided into 12 months. Each such month contains from 29 to 32 whole days, and nearly coincides with each of the astronomical solar months described above (Para 7) but not exactly as fractions of a day have to be avoided.

Beginning of Year.

13. In most varieties the year begins close to the time of Mesh-Sankrâuti, the first month being that corresponding with the astronomical month Mesha, but in the South Malayâlam country it begins with the month corresponding with Sinha, and in the North Malayâlam country with that corresponding with Kanyâ.

Months.

Their Names.

14. The names of the months differ and are given in the following table It will be noticed that the Malayâlam names are corruptions of the Sanskrit names of the signs, while the Bengali and Tamil are corruptions of the Sanskrit names of the lunor months

given below (Para 17). It will also be noticed that whereas in Bengal the month corresponding with Mesha bears the Lunar name Vaisâkha, in the Tamil country it bears the name Chaitra, and the case is similar with the other signs.

Astronomical Solar Months.	Corresponding Calendar Months.		
	Bengali.	Tamil.	Malayalam
Mesha	Baisâk	Chitterai (Sitterai)	Medam
Vrisha	Jaistha	Vaigâsi (Vaiyâsi)	Edavam
Mithuna	Assar	Assi	Midunam
Karka	Shrâban	Adi	Karkadakam
Simha	Bhâdro	Avani	Chingam
Kanyâ	Assin	Purattâdi (Purattâsi)	Kanni
Tulâ	Kârtik	Aippasi	Tulam
Vrischika	Agrahayan	Kârtiggai	Vrischikam
Dhanus	Pous	Mârgali	Dhanu
Makara	Mâgh	Tâi	Makaram
Kumbha	Falgun	Mâsi	Kumbham
Mîna	Chaitro	Panguni	Minam

First date how fixed.

In the different varieties the beginning of the month is fixed by different rules. In some the month begins on the day of the Sankrânti, and in others one or two days after. As this book contains only Bengali solar dates the Bengali rule alone is given here. This rule is that if the Sankrânti takes place between sunrise and midnight the calendar month begins the next day, but if it takes place after midnight the month begins the day after the next. Thus in 1845 A. D. the true Mesha Sankrânti took place according to the Sûrya S. (which prevails in Bengal) at 23 Gh. 30 Pl. after mean sunrise at Lanka on 11th April. Calcutta being $12\frac{1}{2}^{\circ}$ more to the east it took place at 25 Gh 35 Pl. after mean sunrise there. Hence 1st Baisâk was 12th April. Add 30 Dy. 56 Gh. 7 Pl. for the month Mesha, and the Vrisha Sankrânti will be found to have taken place at 21 Gh. 42 Pl. on 12th May. Hence Jaistha began on 13th May. Add 31 Dy. 25 Gh. 13 Pl. for the month Vrisha and the Mithuna Sankrânti will be found at 47 Gh. 55 Pl. on 12th June (morning of 13th June according to Europeans). As it took place after midnight Assar began on 14th June. When once the first date of a month is

Other dates.

settled, the other dates follow in the order of the natural days; thus 13th April was 2nd Baisâk, 14th April 3rd Baisâk and 12th May 31st Baisâk in 1845 A. D. In this way it happens that in different years the same month may have different lengths; the 1st, 6th, and 12th months may contain 30 or 31 days, the 2nd, 3rd, 4th and 5th, 31 or 32 days, and the rest 29 or 30 days.

Months variable in lengths.

Luni-solar reckoning.

15. The moon travels in its orbit round the earth close to the ecliptic, but much faster than the sun appears to do. The time when it is in conjunction with the sun and invisible (new moon) is called Amâvâsyâ (Amâs in the vernaculars) and the time when it is in opposition and presents a full face (full moon) is called Pûrnimâ (Punim or Punem in the vernaculars). The period from conjunction to conjunction or opposition to opposition is a synodical lunar month (Châudra Mâsa), being called Amânta in the first case and Pûrnimânta in the second. The poriod from conjunction to opposition or light fortnight when the moon is waxing is called Sukla or Suddha Paksha, and that from opposition to conjunction or dark fortnight when the moon is waning is called the Krishna, Bahula, or Vadya Paksha. Sudi or Sudi, and Vadi or Badi, are used in the vernaculars for Suddha and Vadya respectively. The period from conjunction upto the time the moon is 12° in advance of the sun is called the first Tithi, that from the time it is 12° to the time it is 24° in advance the second Tithi, and so on for each interval of 12° upto the end of the 15th Tithi, when the moon is 180° in advance of the sun and full. All these Tithis are known by the name of the fortnight as Sukla, Suddha or Sudi, the first being called Pratipad or Pratipadâ (vernacular Padvo or Padvâ), and fifteenth Pûrnimâ, the intervening once being designated by the ordinal numerals Dvitiyâ (second), Tritiyâ (third) and so on. The dark fortnight is divided in the same way into 15 Tithis, they being all called Krishna, Vadya or Vadi, the first after the Pûrnimâ being called Pratipadâ, and the fifteenth Amâvâsyâ. Tithis are commonly written as Sudi 1, Sudi 2 etcetera upto Sudi 15, and Vadi 1, Vadi 2 upto Vadi 14, but the Amâvâsyâ is written as Vadi 30 it being the 30th Tithi of the Amânta month. Half a Tithi is a Karana. The last half of Vadya 14, the two halves of Vadya 15 and the first half of Suddha 1 are called fixed Karanas,

thier respective names being Sakuni, Chatushpada, Nâga, and Kimstughna. The 56 Karanas from the second half of Su. 1 to the first half of Va. 14 are called by the seven names Bava, Bâlava, Kaulava, Taitila, Gara, Vanij, Vishti repeated in the same order eight times so that Bava is the second half of Su. 1, first half of Su. 5 and so on. Like the sun, the moon also travels at an unequal rate being slowest when furthest from the earth or in apogee (Mandochcha), and fastest when nearest or in perigee. In ancient times when this inequality had not been noticed only the mean motion was taken into account. Subsequently even when astronomers came to know of the inequality, for ease of calculation they conceived an imaginary body called the mean moon (Madhyamachandra) travelling at the mean rate of the moon and starting from the apogee at the same time as the true moon (Spashta chandra). The lunar month and Tithi resulting from the motions of the mean sun and moon are called mean (Madhyama) and their lenghts are always the same. The true lunar month and Tithi resulting from the motions of the sun and moon vary in length. The following table contains the durations of the mean, shortest and longest lunar month and Tithi accordiug to the Sûrya S. The mean length of the lunar month according to modern astronomers differs only by a small fraction of a vipala from that of the Sûrya S.

The Luni-solar Calendar.

16. In all varieties of the luni-solar calendar now current save the northern Fasli, the natural day is designated by the true Tithi current at true sunrise, the Panchângas giving with the number of the Tithi, the Ghatis and Palas when it terminates. Natural days so designated may be called civil Tithis. For all ordinary purposes regard is only had to them, but for certain religious and astrological purposes regard is had to the true astronomical Tithis. As a

Civil Tithis.

Tithi is usually smaller than a natural day of 60 Ghatis, it sometimes happens that one falls wholly between two risings of the sun the preceding Tithi having been current at the first sunrise, and the succeeding at the next. In such a case the intervening Tithi does not designate any natural day and is called Kshaya (waste). Sometimes a true Tithi is larger than a natural day and may be current at two risings of the sun and so may designate two natural days. Such a Tithi is called Adhika (additional) or Tryaha-spris (touching three days). In ancient times only mean Tithis were used, and so none could be larger than a natural day or Adhika and the Kshaya came at regular intervals of 62 or 63 days according to the length adopted for the lunar month. Such was the calendar of the Jyotish Vedânga in which every 62nd Tithi was dropped. In the Fasli year of Northern India the first day of the month coincides with the first Tithi of the dark fortnight of other calendars, but after that the days are numbered in their natural order upto 29 or 30 without regard to fortnights or Adhika or Kshaya Tithis.

17. The names of Hindu lunar months are given in the following table. The first column contains the names used in very ancient times and probably derived from the seasons. The second contains the current Sanskrit names derived from the names of the Nakshatras. Before the introduction of the Babylonian Zodiac, and even long after, lunar months were named from the Nakshatras in which their Pûrnimâs took place. Thus if when full the moon stood in Chitrâ or Svâti the month was called Chaitra, if in Visâkhâ or Anurâdhâ it was called Vaisakha and so on. The third column in the following table gives against each month the numbers of the Nakshatras counting from Asvini in which the full moon for that month occurred according to the Sûrya S. Although the same names are used for the months now, the rule for applying the names is quite different and is given below (Para 19). The rest of the columns give the Gujarati and Hindi names of the months; the Bengali and Tamil have been given above (Para 14); the Marathi are the same as the Sanskrit.

Tapas	Mâgha	9,10	Mah	Magh
Tapasya	Phâlguna	11,12,13	Phagan	Phagan

18. In Southern India (south of the Narmadâ) and Gujarat the months used are Amânta *i. e.* ending with the new moon whereas in Northern India (north of the Narmadâ) they are Pûrnimânta. Astronomers use the Amânta alone for their calculations. The Amânta are also called Suklâdi as they begin with the Sukla Paksha, and similarly the Pûrnimânta are called Krishnâdi. The civil beginning of a month is its first civil Tithi Sukla or Krishna as either the Suklâdi or Krishnâdi scheme is followed.

Use of Pûrnimânta and Amânta months

Beginning of month.

19. The rule at present all over India for the naming of the Amânta months is that the lunar month which begins in the astronomical solar month Mîna is Chaitra, that which begins in the solar Mesha is Vaishakha, and so on with respect to the rest. As lunar months are usually shorter than solar, it sometimes happens that a lunar month falls wholly within a solar, so that two lunar months begin in that solar. In such a case both the lunar months bear the same name the first which is wholly included and contains on

Modern rule for application of names to Amânta months

Adhika Mâsa,

Sankrânti being called Adhika (additional) or Prathama (first), and the second Nija (innate) or Dvitiya (second). The Adhika month is usually considered inauspicious. It happens on rare occasions that one of the small solar months Vrischika, Dhanus or Makara is wholly included in a lunar month, and so no lunar month begins in that solar, and hence according to the above rule one of the lunar names Mârgsirsha, Pausha or Mâgha has to be ommitted. Such an omitted lunar month is called Kshaya Mâsa. It usually occurs close to two Adhika Mâsa. The last Kshaya Mâsa according to the Sûrya S. reckoning was Pausha in Saka 1744 (1822-23 A. D.), and the next one will be in Saka 1885 (1963-64 A. D.). In ancient times when only mean lunar and solar months were used, no lunar month was larger than a solar and so there could be no Kshaya month, and the Adhika fell at regular intervals of 30 to 32 months according to the lengths adopted for the two kinds of month. Such was the calendar of the Jyotishavedânga in which every 31st lunar month was Adhika.

Kshaya Mâsa.

Mean months used in ancient times.

20. The names of the Pûrnimânta months have to be deduced from those of the corresponding Amânta as astronomers recognise only the latter. The Sukla Pakha is identical in both schemes and bears the same name but in the Pûrnimânta scheme the Krishna Paksha bears the same name as the succeeding Sukla where as in the Amânta it bears the same name as the preceding Sukla. Thus all the days in Vaisâkh Sukla Paksha would be the same in both schemes, but those of the preceding Krishna Paksha would be of Vaisâkha according to the Pûrnimânta and of Chaitra according to the Amânta scheme. The Adhika month however is treated in the Purnimânta scheme exactly as in the other, so that in this case the bright fortnight precedes the dark even in the Purnimânta. The dark fortnight preceding the Adhika month is called the dark fortnight of the Nija month of the same name, and the bright fortnight following the Adhika is called the bright one of the Nija. The Adhika is thus included between the two parts of the Nija.

Names of Pûrnimânta months.

Adhika Mâsa.

21. At present through the greater part of India the luni-solar year begins with Chaitra Sukla 1, and this is so even when in the Pûrnimânta system the dark fortnight precedes the bright so that the year begins in the middle of Chaitra. The Gujarâtis begin the year of the Vikrama era with Kârtika, and in a few parts of Northern

Commencement of year.

Gujarat and Kathiawad with Ashadha. The Fasli year in Northern India and Bengal begins Pûrnimânta Asvina Vadya 1. The first day of the year is for all ordinary purposes the first civil Tithi, but for certain religious and astrological purposes regard is had to the beginiug of the astronomical Tithi or moment of conjunction.

The Cycle of Sixty Years.

22. Jupiter moves through each sign of the Zodiac by its mean motion in a little over 361 days. Each of these periods is called a Bârhaspatya Samvatsara (Jupiter's year). These periods have been combined into cycles of sixty, each period having a particular name the first being the Prabhava. The names in order are given in a table later on. The Kaliyuga begin with the 27th period Vijaya. Each period is equal to $\frac{1875}{1897}$ of a solar year according to the Arya S., $\frac{18000}{18211}$ according to the Sûrya S., and $\frac{10000}{10197}$ according to Makaranda. Hence the periods of the cycle that have elasped at the beginning, *i. e.* at the mean Mesha Sankrânti, of each year of the Kaliyuga era may be found by the following rules. If K be the expired years of the Kaliyuga, divide by 60 the sum $(26+K+\frac{22K}{1875})$ if the reckoning be by the Arya S. the sum $(26+K+\frac{211K}{18000})$ if it be by the Sûrya S., and the sum $(26+K+\frac{117K}{10000})$ if it be by Makaranda. The integer of the remainder plus one shows the current period and the fraction multiplied by 361 shows the part of it elapsed in days. The Saka year can be converted into the Kaliyuga by adding 3179. The names thus originally applied to Jupiter's years were subsequently applied to solar years, the solar year receiving the same name as that of Jupiter current at the beginning of the solar. As Jupiter's year is smaller than the sun's it happens at intervals of 85 and 86 years that the whole of the former falls within the latter, and so in naming the next solar year one name has to be dropped (Kshaya Samvatsara). Thus according to Makaranda the period current at the begining of Saka 1778 (1856-57 A. D.) was Prabhava the first, and that current at the beginning of Saka 1779 was Sukla the third and so Vibhava the second did not give its name to any solar year and was Kshaya. This is how the cycle is used at present in Northern India.

Jupiter's Samavatsaras.

Solar year named from Jupiter's

Kshaya Samvatsar.

The northern system.

The Southern System.

23. In Southern India no years are dropped, and the cycle is treated as if the names were applicable to the Solar years in succession. In fact all connection with Jupiter is lost. In this form the cycle is in daily use in the Maratha country and Southern India. In the table printed later the *Saka* years which correspond with three such southern cycles are given so as to cover all the years in this book. To find the name of any *Saka* year according to this system, add twelve to the number of the year and divide by 60, when the remainder will indicate the number of the year counting from Prabhava. The names of the years were the same according to both the southern and northern systems for the 85 years preceding *Saka* 831 (909-10 A. D), and it seems probable that the southern system came into existence about that time. At present the number of the northern Samvatsara is 12 more than that of the southern, it being *Sarvari* (No.34) in the south, and Paridhâvin (No. 46) in the north for *Saka* 1822 (1900-1901 A. D.) The difference was 11 before 1856-57 A. D.

Eras.

Era and Epoch.

24. Era means a series of years reckoned from a point of time called its epoch usually marked by some important event such as the accession to the throne of a great king or a victory. Usually in such reckoning the whole of the first year beginning with the epoch is called the year one, the next the year two, and so on; the years so reckoned are called current. But for the expression of an interval for the purpose of calculation, it is more convenient to express the whole years of the period that have expired. Thus an event which happened on Chaitra *Su.* 5 in the third current year would be stated to have taken place two years and five days after the epoch for the purpose of computation by a Hindu calculator. He may if accurate use some word meaning expired or elapsed such as Gate or Atite with the year, but he may not. Years so reckoned are called expired years. Thus the year beginning with Chaitra in 1900 A. D is the year 5002 current of the Kaliyuga era and it began after 5001 years had expired; for shortness the current year would be called "5001 expired." In most parts of the country ever the word "expired" would not be used but the year called merely 5001 just as if it were current.

Current and expired years.

25. The Kaliyuga era is the only one used in the Siddhântas. It is not generally used for civil purposes although often mentioned in Panchângas for calculation. It is probably an invention of the astronomers about the fifth century after Christ, and is made to begin from a time when the mean Sun, Moon, Mercury, Venus, Mars, Jupiter and Saturn are supposed to have been in conjunction at the beginning of Mesha. This is supposed to have happened on a Friday corresponding with 18th February 3102 B. C. Probably the name Kaliyuga was applied to the present age very long before the 5th century, but the epoch was fixed and years began to be counted from it then. Kaliyuga era.

26. The Vikrama era is the principle one used in northern India and Gujarat. In northern India *i. e.* north of the Narmadâ it is used with the luni-solar year beginning with Chaitra and Pûrnimânta months. The Gujarâtis generally use it with the same year and Amânta months beginning with Kârtika, and there is good reason to believe that in former times its year began with Kârtika in northern India also. In some parts of Gujarât and Kâthiâwâd its year begins with Ashâdha. The year which began in A. D. 1900 with Chaitra, Ashâdha, or Kârtika was generally known in India as 1957 and regarded as current. Recent European writers would regard it as 1957 expired and 1958 current, but the evidence for this view is not strong. According to the Indian view, the epoch of this era was in 57 B. C., and according to the other view in 58 B. C. This era is now commonly known in India as the Samvat; but the word is nothing more than an abreviation of Samvatsara a year, and has been used in connection with other eras also. The origin of this era is lost in obscurity and there are a number of theories about it. The current Hindu belief is that it was started by a great king Vikramâditya ruling at Ujain in Mâlva in the first century before Christ, but this belief does not seem earlier than the tenth century. There are several kings of the name Vikramâditya known from inscriptions and other sources but none so early as the first century B. C. The first known date when the word Vikrama has been used in connection with this era is an inscription of Samvat 898 (840 A. D.), and there probably it is not the name of an individual but an abstract noun meaning "prowess". Inscriptions from 450 A. D. to 850 A. D. name the era as that of the Mâlvas a tribe which eventually settled in and gave its name to the province of Vikrama era.

Mâlvâ. Fergusson put forward the theory that this era was first started in 544 A. D. owing to a great victory over foreigners obtained by a Hindu king at Korur near Multan, and Hoerule identified the king with Yasodharman some of whose inscriptions are extant. But this theory has been upset by the finding of earlier inscriptions with the same era. Keilhorn's theory (Ind. Ant. Vol. XX, P.398) is that as the year of this era originally began at the end of the rains with Kârtika when military operations began, it was called Vikrama Kâla (time for prowess), and when this origin of the name was forgotten Vikrama was imagined to be the name of a king who founded the era. Fleet thinks the era originally marked the years of the reign of king Kanishka the great patron of Buddhism and was continued into a regular era by his successors and the Mâlavas an important section of his subjects.

Saka era.

27. The Śaka is the principal era used in Southern India (south of the Narmadâ) and by Karana writers for calculation. It is generally used with the luni-solar year beginning with Chaitra and Amânta months, but in the north, it is sometimes used with Pûrnimânta months, and in the Tamil Country and Bengal with the solar year beginning with Mesha. The year of this era which began with Chaitra or Mesha in 1900 A. D. was in most parts of India known as 1822, but in a few Panchângas published in the Madras Presidency as 1823. There is very good reason to believe that the ordinary number represents the expired year and that the era began in 78 A. D. The origin of this era is also lost in obscurity. The current Hindu belief is that it was started by a southern king Śâlivâhana in commemoration of his victory over Vikramâditya the supposed founder of the Vikrama era. The older Hindu belief reported by Alberuni (1030 A. D.) was that the era was founded by Vikramâditya in memory of his victory over a Śaka king. Cunningham once combined the two beliefs into a theory that the era was started by Śâlivâhana in memory of his victory over the Śakas. None of these theories seems to be correct. The name of Śâlivâhana first appears coupled with this era so late as 1272 A. D. An inscription of 578 A. D. shows that the era began with the accession of a Śaka king not his defeat. The Śakas were probably the Sacae or Scythians. Oldenburg thinks the era began with the accession of Kanishka (Ind. Ant. Vol. X, P. 213). Fleet thinks it began with the accession of Nahapâna the predecessor of the Kshatrapas of Western India.

Bhandarkar thinks it began with the accession of an overlord of Nahapâna (History of the Dakhan Section VI).

28. The Burmese era given in this book is the Prome era said to have been introduced by king Samandari. It is the same as the current Saka year with the Bengali solar calendar. Hence the number of its year is one more than the ordinary Saka which is an expired year. The Burmese year 1823 began in 1900 A. D. Burmese era of Prome.

29. The Maghi era given in this book prevails in Chittagong. It is the vulgar Burmese era called Sakkarâj introduced into Chittagong after its conquest in the 9th century by the Arakanese a class of whom were called Maghas. It is used with the Bengali solar calendar. The Maghi year 1262 began in 1900 A. D. Maghi era.

30. The Bengali San prevails throughout Bengal. It is used with the Bengali solar calendar. It dates from the time of the Emperor Akbar. His reign began in February 1556 A D., when the Hijri year 963 was current and the Hindu solar year which began in that Hijri year was given the same number. The reckoning has been kept up since according to solar years. The Bengali San 1307 began in 1900 A. D. Bengali San.

31. The Fasli San the dates of which are given in this book is current in northern India. It is used with the Luni-solar year beginning with Pûrnimânta Aswina Vadya 1. The peculiar way in which its days are numbered has been described above (Para 16). This era also dates from the reign of Akbar. The luni-solar year which began in September 1555 was reckoned as 963 the number of the Hijri year which began about the same time, and the reckoning has been since kept up by luni-solar years. The Fasli year 1308 began in 1900 A. D. Fusli San of Northern India

32. There are two other Fasli years one used in the Bombay Presidency, and the other in the Madras. They both date from the year 1636 A. D. when the Hijri year 1046 was current and the reckoning beginning with the number has been kept up by solar years. The Bombay year begins with Mrigsâl *i. e.* the day when the sun enters the Nakshatra Mrigasiras about the 5th or 6th of June. The Madras year originally began with the Karka Sankrânti; its beginning was first fixed by the Madras Government on 12th July, and later on Fasli San of Bombay and Madras

1st July. Neither of these years has any months or dates of its own, and hence there are used with them the months and dates of any other local calendar. The year 1310 of these Sans began in 1900 A. D.

Shuhur San.

33. Very similar to the Bombay Fasli San is the Shuhur San (year of months) used in the Maratha country. It begins with the Mrigasâl and has no months or dates of its own. This era is supposed to have begun in 1344 A. D. with the number 745 being that of the Hijri year then current. The year 1301 of this era began in 1900 A. D. This year has been extensively used in old sanads and similar documents, and its number is invariably expressed in Arabic words. Thus the year 1245 which began in 1844 A. D., would be written not in figures, but in words "Shuhur San Khamas (five) Arbian (forty) Mayatin (two hundred) va Alaf (and a thousand)." These numerals as ordinarily written in Marathi are for 1 Ihide, 2 Isne, 3 Salâs, 4 Arbâ, 5 Khamas, 6 Sita, 7 Sabâ, 8 Samâna, 9 Tissâ, 10 Ashar, 20 Ishrin, 30 Salasin, 40 Arbain, 50 Khamsain, 60 Sittain, 70 Sabain, 80 Samânin, 90 Tissain, 100 Mayâ, 200 Mayâtain, 300 Salâs Mayâ, 1000 Alaf.

Nauroz era.

34. The era called Nauroz in this book is the Saka era used with the tropical year, and tropical solar months (see para 9). Its year begins on the day of the vernal equinox when the sun enters tropical Aries. This day is called Nauroz (new day) such being the Persian name of new year's days. The names of its twelve months are the Arabic names of the signs beginning with Aries, and each month begins on the day the sun enters that sign. These months are 1 Hamal, 2 Sûr, 3 Jauza, 4 Sartân, 5 Asad, 6 Sambala 7 Mizan, 8 Akrab, 9 Kûs, 10 Jaddi, 11 Dalw, and 12 Hût. The months contain from 29 to 32 days each. This calendar is the same as the Ilahi introduced by Akbar, with only a change of names. Akbar gave the months and days the old Persian names Farvardin, Ardibehest, etcetera and Hormuzd, Behman etcetera respectively. In the present Nauroz calendar the months are named from the signs as above, and the days of the month are only numbered, not named. The Ilahi era began with the year of Akbar's accession (1556–57 A. D.), whereas the Nauroz era began with the Saka in 78 A. D. The year 1822 Nauroz and 345 Ilahi began in 1900 A. D.

Ilahi era.

35. To find the Christian year in which any year of the above

eras began, subtract 3101 from the Kaliyuga year (expired), and 57 from the ordinary Vikrama year, add 78 to the ordinary (expired) Saka or Nauroz year, 77 to the Burmese Prome year, 638 to the Maghi year, 593 to the Bengali San, 592 to the Fasli San of Northern India, 590 to the Fasli San of Bombay or Madras, and 599 to the Shuhur San. The result will be the year required in each case.

Hindu Holidays.

36. The following is a short account of the more important Hindu holidays, especially those of western India. Most of them occur according to the luni-solar calendar and are tabulated below. The Sankrântis depend on the solar motion (para 7). The chief of these is the Makara Sankrânti. When the sidereal signs coincided with the tropical the sun's northern course, called Uttarâyana began on this day, and this name or one of its corruptions like Utrân is still appllied to this day.

Chaitra	Su. 1.	Varsha Pratipadâ. New year's day. Gudhi (or Gudi) Pâdavâ in Marathi, when the Gudhi pole is set up before the house-door.
,,	Su. 9.	Râma Navamî. Birth day of Râma.
Vaisâkha	Su. 3	Akshaya Tritiyâ, Akhâtrij in the Vernacular. The consequences of meritorious acts performed on this day are permanent.
Jyeshtha	Su. 15.	Vata-Sâvitrî. Women observe a fast and worship the bunyan tree (vad) to keep them from widowhood.
Ashâdha	Su. 2.	Ratha Yâtrâ or Rathotsava. Idols are placed in cars (Rath) and paraded.
,,	Su. 11.	Sayani. Vishnu goes to sleep for four months.
Srâvana	Su. 5.	Nâga Panchamî. Serpents are worshipped for protection against bites.
,,	Su. 15.	Srâvani. The sacred thread is renewed. Nârali-Pûrnimâ in Marathi, as cocoanuts are thrown into the sea on this day for propitiation, the stormy part of the monsoon being supposed to be over. Balev in Gujarâti. Rakshâs (Râkhadi in Gujarâti), ornamental threads serving as charms are tied round the wrist.
,,	Va. 8.	Krishna Janmâshtami or Gokulâshtami. The

64815
THE RAMAKRISHNA MISSION
INSTITUTE OF CULTURE
LIBRARY

birthday of Krishna or the day he was moved to Gokula to save him from Kansa.

Srâvana Va. 30. Pithorî Amâvâsyâ. The Pithorîs attending on Durgâ are worshipped.

Bhâdrapada *Su.* 4 Ganesha Chaturthi. Birthday of Ganesha or Ganapati.

,, *Su.* 6 to 8 or 7 to 9 } Gaurî Utsava, festival of Gaurî, or Pârvatî, the wife of *Siva*.

,, *Su.* 12. Vâmana Dvâdasi. Birthday of Vâmana the dwarf incarnation of Vishnu.

,, *Su.* 14. Ananta Chaturdasî. Birthday of Ananta.

,, Va. 30. Sarvapitri or Mahâlaya Amâvâsyâ. *Srâddha* for all deceased persons are performed this day, the whole of this dark fortnight being devoted to the Pitris.

Asvina *Su.* 1 to 9 Navarâtra. Nine days devoted to the worship of Durgâ or Kâli who was born on *Su.* 8. Nortan in Gujarâti.

,, *Su.* 10. Vijayâ Dasamî. Tenth of victory, when military operations used to begin. Arms, horses etcetera are worshipped.

Also called Dasaharâ or in the vernacular Dasarâ or Daserâ; the word means "taking away the ten" sins and is applied to Durgâ who slew Mahishâsura on this day. The word is also applied to the Ganges and the day of her descent on the earth *viz.* Jyeshtha *Su.* 10.

,, *Su.* 15. Sharad (autumn) or Kojâgarî Pûrnimâ; in Gujarâti Mânek-thâri Punîm. Devoted to the worship of Lakshmî.

,, Va. 12 Govatsa Dvâdasî; Vâgh Bâras in Gujarâti.

,, Va. 13 Dhana Trayodasî. Wealth and its goddess Lakshmî are worshipped, and a lamp is lighted in honour of Yama.

,, Va. 14 Naraka Chaturdasi; Kâli Chaudas in Gujarâti. Vishnu conquered the demon Naraka; Hanumân is worshipped; the night is a favourite time for magic rites.

,, Va. 30 Dipâvalî; Divâlî in the vernacular; festival of lights.

Kârtika *Su.* 1 Bali Pratipadâ. New year's day of the Gujarâtis. King Bali was sent to Pâtâla by Vishnu.

,, *Su.* 2 Yama or Bhrâtri Dvitiyâ. Bhau Bij in Marâthi. Yama was entertained by his sister Yamunâ, and hence brothers are entertained by their sisters on this day.

,, *Su.* 11 Prabodhini Ekâdasi. Vishnu wakes from his four months' sleep. Marriage of the Tulsi plant.

,, *Su.* 12 Deva Divâlî in Gujarât.

,, *Su.* 15 Tripuri Pûrnimâ. *Siva* killed the demon Tripurâ.

Mâgsirsha *Su.* 15 Datta Jayantî. Birthday of Datta.

Mâgh *Su.* 5 Vasanta Panchamî. Spring is supposed to begin.

,, Va. 7 Ratha Saptamî.

,, Va. 14 Mahâ *Sivarâtri*. The great night of *Siva* when his Lingas are worshipped all night.

Phâlguna *Su.* 15 Hutâsani or Holika. In Marâthi Shimagâ, in other varnaculars Holi. Spring festival in honour of Krishna and Gopîs.

THE MAHOMEDAN CALENDAR.

37. The Arab calendar of the time of Muhammad is used throughout the Mahomedan world for religious purposes, and in most places also for civil purposes. The year of this calendar consists of twelve lunar months. Their names are:—

Origin.

Structure.

Names of months.

1. Muharram.
2. Safar
3. Rabi-ul-avval (Rabi the first)
4. Rabi-ul-akhir (Rabi the last) or Rabi-us-sâni (Rabi the second)
5. Jamâdi-ul-avval (Jamâdi the first)
6. Jamâdi-ul-Akhir (Jamâdi the last) or Jamâdi-us-sâni (Jamadi the second)
7. Rajab
8. Shâban
9. Ramzân
10. Shavvâl
11. Zûl Kâda
12. Zûl Hijja

Beginning of day.

Beginning of month.

The day is considered to begin with sunset, so that the night which follows daylight on Thursday is called the night of Friday and so on. The month is by most taken to begin from the evening when the new moon becomes first visible, and this way of counting

Hilâli reckoning.

is called Hilâli, Hilâl being Arabic for new moon. The rest of the dates follow in the natural order of the days. As a lunar month is of 29 Dy. 12 Hr. 44 Mt. 2·8 Sd. twelve of them amount to 354 Dy. 8 Hr. 48 Mt. 33·6 Sd. and so this lunar year falls short of the Solar by nearly eleven days. For 200 years before the time of Muhammad the Arabs used to make up the difference by intercalating a month every two or three years, but he forbad such intercalation (Korân Sura IX 37), and since his time there has been none. The era used with this calendar is that of the Hijra *i. e.* the flight of Muhammad from Mecca to Yathrib now called Madina. The epoch of this era is the first day of the Arab year in which the flight took place *i. e.* 1st Muharram corresponding with Friday 16th July 622 A. D. and beginning with sunset on Thursday. The flight took place about two months later Muhammad having arrived at Kuba on the outskirts of Yathrib on 8th Rabi-ul-avval corresponding with 20th September. This era was introduced by the Khalif Umar in the 17th year of the Hijra (638 A D.). For information about this calendar reference may be made to the articles Calendar, Chronology, Hijra and Mahomet in the Encyclopædia Brittanica (11th Edition) and to Albiruni's Chronology of Ancient Nations (Sachau's English translation pages 5, 13-15, 33-35, and 70-81).

Intercalation forbidden.

Era of the Hijra

Authorities

Calculation of dates.

38. Most Mahomedans begin a month from the first appearance of the new moon, with the limitation that no month can exceed 30 days, so that even if owing to clouds or otherwise a particular new moon is not visible a new month is begun if the previous new moon has been seen first thirty days before. The visibility of the new moon depends on the true positions of the sun and moon and to calculate it properly the inequalities of their motions as well as the longitude and latitude of the place have to be taken into consideration. As these calculations are elaborate various plans have been devised to fix the dates more easily. Two of them are described here but it must be remembered that the dates so fixed are only approximate and may differ by a day or two from the dates in general use derived from actual observation of the new moon, and that for accurately fixing a Mahomedan date some other guiding mark such as the weekday is always necessary.

Approximate plans.

(*a*) One of the commonest plans is bassed on the mean motions of the sun and moon the inequalities being neglected. The length of a mean lunar-month is assumed to be 29 Dy. 12 Hr. 44 Mt., of

a lunar year of twelve such months $354\frac{11}{30}$ Dy. and of 30 such years 10631 Dy. Hence the years of the era are divided into cycles of 30, of which 19 years contain 354 days, and 11 years 355 days each. The months are taken to contain alternately 30 and 29 days making 354 days in an ordinary year; in the years which contain 355 days the last month is made to contain an additional 30th day. The years of the cycle containing the additional day are according to most modern calculators following Ulugh Beg the 2nd, 5th, 7th, 10th, 13th, 16th, 18th, 21st, 24th, 26th and 29th. The era is taken to begin with Friday 16th July 622 A. D. The tables given in the works of Warren, Cowasji Patel, Cunningham, Sewell and Dikshit named above (Para 3), in Woolhouse's Measures, Weights and Moneys of all Nations, and in the Encyclopædia Brittanica Article Calendar, are all based on this plan. For other plans of a similar nature reference may be made to Albiruni (Sachau's translation pages 138 and 176 to 185). A few sects use calendars based on such plans and so their dates may differ by a day or two from those of the majority of their co-religionists. Mean motion plan.

(*b*) The other plan usually followed by Indian almanac makers is based on the Hindu calendar. They assume that the new moon becomes first visible at the end of the first astronomical Tithi (See Para 15 above). Hence if that Tithi ends before sunset the Mahomedan month is made to begin from that sunset, the first date coinciding during day light with Sukla 2; but if the first Tithi ends after sunset, the Mahomedan month is made to begin with the next sunset the first date coinciding with Sukla 3. This is the method followed in this book, and it gives results nearer the truth than the preceding method, as the Hindu calculation for the conjunction takes into account the inequalities in the motions of the sun and moon and is fairly accurate, and the assumption as to the visibility of the new moon is also near the truth. The Indian plan

39. A tabular list of the more important Mahomedan holidays is given below. Besides these there exist many local holidays called Urus (feasts) in honour of various saints and holy men. Some holidays are peculiar to certain sects such as the Shias. Reference may be made to Albiruni Pages 325 to 334.

1st	Muharram	New year's day.
10th	,,	Ashura (10th day). Originally it was a day of rejoicing when God took compassion on Adam,

	but later it has become a day of mourning especially among the Shias, as on this day in A. H. 61 (A. D. 680) Husain the son of Ali by Fatima daughter of Muhammad was slain with his adherents at Karbala. The Shias mourn for his death as well as that of his brother Hasan, who was poisoned in 669 A. D. from the beginning of Muharram. The Sunni Mussalmans of India build intimations of the Mausoleum at Karbala over the tomb of Husain, call them Tâziyâs (lamentation) or Tâbuts (biers) and parade them in the streets. The night preceding the 10th is called in India Katal-ki-rât or night of slaughter.
20th Safar	Chehlum. 40th day from Husain's death kept by the Shias.
Last Wednesday in Safar.	Akhiri Chahâr Shamba. The prophet recovered a little from his last illness and took his last bath on this day. This day, 10th Muharram and 15th Shâban are called the three lesser Ids.
12th Rabi-ul-avval	Bari Wafât (the great death). Muhammad died on this day. Some think he was also born on this day and so call it Id-i-vilâdat (feast of birth).
26th Rajab	Shab-i-Miaraj (night of ascent). Muhammad ascended to heaven on his horse Burak on this night.
15th Shâban	Shab-i-Barât (night of record). The actions of men are supposed to be recorded on this day, and prayers are recited for the dead. It is one of the three lesser Ids.
Ramzân	The whole month is one of fast.
27th Ramzân	Shab-i-Kadr (night of power), when the Koran was received from heaven by Muhammad.
1st Shavvâl	Idi-Ramzân, or Id-ul-fitr (festival of breaking fast); the great fast of Ramzân is broken this day. It is one of the two greater Ids.
10th Zûl Hijja	Bakri Id (feast of the Bull,) or Id-uz-Zohâ, or Id-i-Kurbân (feast of sacrifice), one of the two greater Ids. Abraham intended to offer his son Ishmael as a sacrifice; hence an animal is usually sacrificed on this day.

THE PARSI CALENDAR.

40. The Parsi Calendar is that of the old Persians when they were Zoroastrians. The year of this calendar consists of 12 months (Mah) each of 30 days (Roz), and 5 additional days at the end called Gathas. Each of the months and days bears a name, that of God or one of his angels, and the five additional days bear the names of the five Gathas the oldest and most sacred hymns of the Avesta. The names commonly used by the Parsis of India for the months and days are the following, *viz*:— Origin. Structure. Names of days and months.

Names of the twelve months.

1. Farvardin	4. Tir	7. Mehr	10. De
2. Ardibesht	5. Amardâd	8. Avân	11. Bahman
3. Khurdâd	6. Shahrivar	9. Adar	12. Aspandâd

Names of the 30 days.

1. Hormuzd	11. Khorshed	21. Râm
2. Bahman	12. Mohr	22. Guvâd
3. Ardibesht	13. Tir	23. Dep-Din
4. Shahrivar	14. Gosh	24. Din
5. Aspandâd	15. Dep-Mehr	25. Arshisang
6. Khurdâd	16. Mehr	26. Astâd
7. Amardâd	17. Srosh	27. Asmân
8. Dep-Adar	18. Rashna	28. Zamyâd
9. Adar	19. Farvardin	29. Mâhrespand
10. Avân	20. Beherâm	30. Anerân

Names of the 5 Gathas.

1. Ahunavad	3. Spentomad	5. Vahishtoyasht
2. Ustavad	4. Vohukhshathra	

This year of 365 days is divided into six periods of 45, 60, 75. 30, 80 and 75 days respectively by the six festivals called Gahambars (days of meeting). These festivals are probably seasonal in origin and consist of 5 days each, the last Hamaspathamedem coinciding with the 5 Gathas. The names and present places of the other five Gahambars are given below in the list of holidays (Para 43). The first day of the first month Farvardin is called by the Persians Nauroz (new day), and that is its original and proper name, but the Parsis of India call it Pateti (day of repentance) and the preceding day Nauroz which is a misnomer. The Gahambars Nauroz

The Yazdejardi Era.

41. The era used by the Parsis of India as well as their coreligionists in Persia is named Yazdejardi from the last Sassanian monarch Yazdejard Shahriâr. The epoch of this era as recorded by a large number of historians, chronologers, and astronomers, and confirmed by a comparison of many dates recorded both in the Persian and other known calendars, is Tuesday 16th June 632 A. D., corresponding with the first day Hormuzd of the first month Farvardin of the Persian calendar of the time. Yazdejard is believed by many to have ascended the throne on this very day. The Persian calendar with this epoch was in use in Persia for many centuries after the introduction of Mahomedanism, and is even now used by the Zoroastrians of Persia. As the seasons fall back in this calendar by nearly a quarter of a day every year Sultan Jalâluddin Malik Shah Seljuk introduced in Persia in 1097 A. D. the intercalation of one day in nearly every four years, and occasionally in five years. From that time the unintercalated calendar began to be called Kadimi or the old, to distinguish it from the new one called Jalâli. The Parsis of India used, and most of them still use the unintercalated calendar but it is just 30 days behind the Kadimi; thus the first day of the first month of the Yazdejardi year 1270 of the Indian Parsis fell on 15th September 1900, whereas that of the Persians fell on 16th August. This discrepancy was first noticed by a Persian priest Jamasp who came to India in 1720 A. D; but he attached little importance to it. Some years later another Persian by name Jamshed induced a number of Parsis to adopt the Kadimi calendar and they began by calling 6th June 1745 A. D. which was the 29th day of the 8th month Avân according to the Indian reckoning, the 29th day of the 9th month Adar. The majoritiy of the Parsis stuck to the Indian reckoning calling it Shâhenshâhi (Imperial), and that is the reckoning given in this book. The Kadimi is obtained from it by adding one to the number of the month. The minority who have adopted the Kadimi reckoning call the other Rasami (customary).

Epoch.

Intercalation.

Jalâli reform.

Kadimi Calendar.

Shahinshâhi Calendar.

Controversy.

42. The Shâhinshâhis asserted that under the Zoroastrian Kings of Persia it was customary to intercalate a month called the Kabisa month once in about 120 years, and that the ancestors of the Indian Parsis had intercalated such a month whereas those left in Persia had not. The Kadimis asserted that there was no custom

to intercalate and that the discrepancy was due either to a pure mistake in reckoning or to an intercalation contrary to custom and religion. The controversy led to an investigation of the calendar and its history, and three of the leading books of the time were written in Gujarati by three learned priests, *viz.* "The Account of the Kabisa" by Dastur Aspandiarji of Broach (1826), the Khorch Vehijik by Dastur Edulji of Bombay (1828), and the Avijeh Din by Mullan Firoze Dastur of the Kadimis (1830). The subject was reopened by the late Mr. K. R. Cama in a series lectures and writings about 1868 chiefly with a view to reform the calendar on the European plan of intercalating one day every four years and he worked for this object to the end of his life (1909) but without much success. One of his best books, almost non-controversial, is the Yazdejardi Târikh (1870) in Gujarati. The report of the Roz Mah Committee (1904) in Gujarati compiled by Mr. Cama and his associates although highly controversial contains much information. Another book of research and furnishing some new information is Dr. M. B. Daver's phamplet in Gujarati about the first month of the calendar (1907). Cowasji Patel's Chronology (1866) gives a fair account of the calendar. It has also formed the subject of investigation purely from a scholar's point of view by Spiegel, Roth, Harlez, Geiger (Civilisation of the Eastern Iranians, Dastur Darab's English translation Pages 142-156), West (Sacred books of the East Vol. XLVII Preface Paras 80-90), and others. The chief authoritiy for its form and history in Sassanian times and some centuries after is Albiruni, whose work has been quoted above (Para 37) in connection with the Mahomedan calendar. Some light is also thrown on it by a Hindu astronomical work of the sixth Christian century *viz.* the Paucha Siddhântikâ of Varâhamihira (see Journal of the B. B. R. A. S. Vol. XIX, Pages 136-141).

Investigation and authorities

43. The results of the investigation may be summarised for the present as follows. This calendar was probably introduced in Persia in the later years of Darius or under one of his successors, Darius having used another calendar in his inscriptions. Its structure is the same as that of the old Egyptian calendar, and was possibly borrowed from that. It was originally the same in structure and coincided with the calendars of Armenia, Khwarism (Khiva), and Sogdiana (Samarkand). At its introduction the beginning of its year was probably close to the vernal equinox. Intercalation

History.

was introduced into it at some time in Persia, but not in Armenia, Khwarism, or Sogdiana. This intercalation consisted in putting the Gathas, which had in the course of time receded from the vernal equinox, forward at the end of some month other than the twelfth so also bring them as close as possible to the vernal equinox, and in shifting the other Gahambars in the same way keeping their fixed distances from the Gathas. Thus the Gahambars marked the seasons although the months receded. The last intercalation in Persia took place in the time of Yazdejard bin Shapur (404-420 A. D.), when the Gathas were shifted from the end of the 6th month Shahrivar to the end of the 8th month Avân, and they remained there upto the time of Albiruni (1000 A. D.) Theory required that the Gathas should be shifted forward one month every 120 years, but there was no exact compliance with it. There is nothing to show when this system of intercalation was first started, or when the Gathas were shifted to the end of the 6th month Shahrivar, or where they were before that shifting whether at the end of the 12th month Aspandâd as originally placed or at the end of any succeeding month. It is also not clear when the Gathas were shifted from the end of Avân to the end of Aspandâd; possibly this happened at the time of the Jalâli reform about 1079 A. D. It is probable that the Parsis of India intercalated a month in ignorance of the original method of intercalation, and to this is due the difference between their calendar and the Kadimi; but when or where this intercalation took place is not certain. 64815

Holidays.

44. The days on which the names of the Roz and Mah are the same are called Jashans of the respective angels. The principle holidays of the Parsis consist of these Jashans, four of the more important of which are named in the table below, the Gahambars mentioned above (Para 39), and a few other days mentioned in the following table.

Table of Holidays.

1st Farvardin Nauroz. New year's day, called in India Pateti (day of repentance).

6th Farvardin Khurdâd Sâl. The day of Zoroaster's birth and many other events.

7th Farvardin Amardâd Sâl.

19th Farvardin Farvardigân (or Farvardiân) day, sacred to the Fravashis and deceased persons.

11th-15th Ardibesht	Mediozarem Gahambar.
11th-15th Tir	Medioshem Gahambar.
26th-30th Shahrivar	Peteshem Gahambar.
15th Mehr	Mehrgân one of the most important Jashans.
26th-30th Mehr	Ayathrem Gahambar.
10th Avân	Avân Jashan.
9th Adar	Adar Jashan.
19th Adar	Farvardigan (or Farvardiân) day, sacred to the Fravashis and deceased persons.
11th De	Zarthostno Diso. Day of Zoroaster's death.
16th-20th De	Mediarem Gahambar.
6th Aspandâd	Avardad Sâl Gâh. It coincides with the Kadimi Nauroz and is only an Indian Parsi holiday. It was probably instituted to mark the beginning of the old year when a month was intercalated by the ancestors of the Indian Parsis.
26th-30th Aspandâd	These with the five Gathas are called Farvardigân or Farvardiân or Muktâd days, sacred to the Fravashis and deceased persons. Sometimes the first seven days of Farvardin are included with these.
The Gathas	Hamaspathmedem Gahambar. The last Gatha is misnamed Nauroz by the Indian Parsis.

THE ENGLISH CALENDAR.

Origin.

45. The English calendar is the old Roman as reformed by Julius Cæsar and further reformed by Pope Gregory XIII. The year of this calendar contains twelve months the names and lengths in days of which are as below:—

January	31	May	31	September	30
February	28	June	30	October	31
March	31	July	31	November	30
April	30	August	31	December	31

Structure.

These are the days in the ordinary years, but every three ordinary years are followed by a fourth in which February contains 29 days. Such a year is called bissextile or leap, and it happens

to be every year of the Christian era whose number is divisible by four without leaving a remainder. So far the structure is the same as that of the Julian calendar which was formerly in use in most Christian countries and is still in use in Russia. As the average year of the Julian calendar is of 365¼ days, whereas a tropical year is shorter by 11 Mt. 14 Sd. the seasons fall earlier in this calendar by nearly 3 days in 400 years. Hence it was decreed by Pope Gregory XIII in A. D. 1582 under the advice of Aloysius Lilius a physician and astronomer of Naples, that the century years of the Christian era should not be leap save those whose numbers are divisible by 400; thus A. D. 1700, 1800 and 1900 were not to be leap, but A. D. 1600, 2000 etcetera were to be so. As for the regulation of religious feasts and fasts it was considered necessary to bring back the vernal equinox from 11th March its place in 1582 A. D. to 21st March the place which it was thought to have occupied at the time of the Council of Nice in 325 A. D. Gregory further directed ten days to be dropped by calling the 5th of October 1582 Julian 15th October. The calendar so reformed is called Gregorian, and it has been gradually adopted in most Christian countries. It was adopted in England by an act passed in 1751 A. D. when the difference between the Julian and Gregorian calendars had amounted to 11 days owing to the dropping of the leap day in 1700 A. D. under the latter system. It was decreed by the Act that the day after 2nd September 1752 should be called 14th September, and the rule as to the dropping of the leap day in 3 out of 4 century years should be adopted. The same Act provided that the first day of the year which for legal purposes used to be 25th March in England should be 1st January from 1752. Dates according to the Julian calendar are called Old Style, and according to the Gregorian New Style. The difference between the two was 10 days in the 16th and 17th centuries, 11 days in the 18th, 12 in the 19th and is 13 in the 20th.

Use of the Julian Calendar.

Gregory's reform.

Reform in England.

Old and New style dates.

History of the Julian Calendar

46. The Julian calendar derives its name from Julius Cæsar who with the help of Sosigenes an astronomer reformed the Roman calendar which had fallen into great confusion. The change was introduced in 46 B. C. which had to be of 445 days to make up for the previous defect; the first reformed year was 45 B. C. By a mistake of the pontiffs during the first 36 years a leap year was introduced every third year, and to remedy this excess the next

three leap years upto the year 4 A. D. were treated as ordinary under a decree of the Emperor Augustus. The month July was named so in honour of Julius its original name being Quinctilis (the 5th). Later, Augustus named the next month from himself its original name being Sextilis (the 6th). Julius had arranged the number of days in the months in a regular manner, the number in the odd months *i. e.* the 1st, 3rd etcetera being 31, and in the even months save February 30, it being 29 in February in odd years & 30 in a leap year. Augustus made the present irregular arrangement because he wanted the month bearing his own name to contain as many days (31), as that bearing the name of Julius. The Romans used to introduce the leap day between the 24th & 25th of February, and not at the end of the month as is the case now. According to their mode of expression 25th February used to be called "the sixth day before the Kalends of March" (*i. e.* 1st March), and the leap day used to be called the "second sixth day (bissextus) before the Kalends of March"; that is why the leap year is called bissextile. It is said that the Roman year as originally introduced by Romulus was of ten months only, and the months of January & February were introduced later by Numa Pompilius. There is little doubt that it began originally with March, and that is why the months July & August were originally called Quinctilis (the fifth) and Sextilis (the sixth), and the succeeding four months derive their names from the numerals, seven, eight, nine, and ten. January is named from Janus God of the sun and the beginnings of all undertakings, February from Februus God of purification, and March from Mars the God of war. The etymologies of the names April, May and June are doubtful some ascribing them to the names of the divinities, Avrilis, Maia, and Juno, and others to other circumstances. Lewis's History of Ancient Astronomy (Chapter I section 9) may be consulted with respect to the names of the months, and the Articles Calendar and Chronology in the Encyclopœdia Brittanica (11th Ed.) with respect to the other topics connected with this calendar.

Origins of the month names.

Authorities.

47. The era generally used now in Christian countries is that of Christ supposed originally to begin with the birth of Christ, although Christ was probably born four years before according to later research. This era was introduced into Italy by a Roman abbot Dionysius the Little in the sixth century after Christ and

Era of Christ.

Holidays.

in the course of a few centuries it was adopted in other Christian countries. The more important days in this calendar most of which are connected with the Christian religion are tabulated below. The feasts of the Church of England are given in the Book of Common Prayers and are divided into immovable which fall on fixed dates every year, and movable whose dates vary. The movable feasts for the most part depend on Easter day. According to the rule laid down by the Council of Nice in 325 A. D. "Easter day is the first Sunday after the full moon which happens upon or next after 21st of March, and if the full moon happens on a Sunday, Easterday is the Sunday after." The full moon for this purpose is not ascertained from observation or current astronomical tables, but before the Gregorian reform it used to be fixed by the Metonic cycle and since then it is fixed according to the system devised by Lilius and Clavius. A full explanation of this system will be found in the Article Calendar in the Encyclopœdia Brittanica (11th Ed.) For the purpose of this book a list of Easter days is given at page 37. Advent Sunday does not depend on Easter but is the nearest Sunday to St. Andrew's day *i. e.* 30th November whether before or after. For further information about the Holidays reference may be made to the Book of Days by Chambers.

Rule about Easter.

Authority about Holidays.

Table of immovable feasts aud other fixed days.

1st January	New Year's day, or Circumcision day. Christ was circumcised this day.
6th January	Epiphany, or Twelfth day, the first because it was the day of manifestation of Christ to the wise men of the East, and the second because it is the twelfth day after Christmas.
2nd February	Purification of the Virgin Mary, or Candlemas. It is the 40th day from Christmas, the day of Christ's birth, and his mother was purified this day. Many candles used to be lighted on this day. Candlemas is one of the old quarter days of Scotland, the other three being, Beltane (1st May), Lammas (1st August), and Hallowmas (1st November).
17th March	St. Patrick's day, that of the patron saint of Ireland and holy among Roman Catholics.

25th March	Annunciation-day, or Lady day. On this day the Angel Gabriel announced to the virgin Mary that Christ would be born to her. It is one of the four quarter days in England when rents become due and lands are taken up or given back, the other three being Midsummer (24th June), Michaelmas (29th September) & Christmas (25th December).
1st May	Mayday, a rural holiday not connected with the Christian religion. Its old celtic name is Beltane, and it is one of the old quarter days of Scotland.
24th June	Mid summer day. Nativity of St. John the Baptist. One of the English quarter days.
1st August	Lammas (bread feast), feast of first fruits. One of the old Scotch quarter days.
1st November	All Saints, or All Hallows day, or Hallowmas. Kept in memory of all saints and martyrs. One of the old Scotch quarter days.
2nd November	All Souls' day. Kept by Roman Catholics in memory of all the deceased faithful.
11th November	Martinmas, or St. Martin's day. One of the two present Scotch term days for the payment of rent, the other being 15th May.
30th November	St. Andrew's day, that of the patron saint of Scotland. The period before Christmas including four Sundays is called Advent, and the first Sunday in Advent is the one nearest to St. Andrew's day either before, or after.
25th December	Christmas or Yule-tide. The day of Christ's birth.

Table of Moveable Feasts.

Septuagesima Sunday	} Nine weeks before Easterday.
Shrove Sunday or Quinquagesima Sunday	Seven weeks before Easterday. The three days beginning with this day and ending with Shrove Tuesday are called Shrove tide, as in Catholic times people used to be shriven then *i. e.* made to confess and given absolution, after which they indulged in amusements.
Ash Wednesday or first day in Lent	46 days before Easterday and immediately after Shrove tide. On this day Roman Catholics sprinkle ashes on their heads. The fourty days' fast of

	Lent begins on this day and ends on the Sunday before Easterday, being in memory of Christ's fast in the wilderness.
Ember-days	Three days of fast occurring in each quarter of the year, being the first Wednesday, Friday and Saturday following (*a*) the first Sunday in lent, (*b*) Whitsunday, (*c*) Holyrood day (14th September) and (*d*) St. Lucia's day (13th December).
Plan Sunday	The Sunday before Easterday and the last day in Lent, so called because on this day Christ entered Jerusalem when palm branches were strewed in his way by the people.
Good Friday	Two days before easter. Christ was crucified on this day.
Easter	The Sunday of Christ's resurrection when he rose from the dead, one of the three greatest feasts of the Christian Church, the other two being Whitsunday and Christmas.
Rogation Sunday	Five weeks after Easter. The week beginning with this day is called Rogation week, and the three days after this day Rogation days, as rogations or special prayers are offered on them.
Ascension day or Holy Thursday.	Forty days after Easter and immediately after the Rogation days. Christ ascended to heaven on this day.
Whitsunday or Pentecost	Seven weeks after Easter. The Holy Ghost descended on the disciples of Christ this day when they were gathered for a feast. It is called Pentecost because it is the fiftieth day from Easter, and Whitsunday because converts in the primitive Church wore white robes on it. The week beginning with this day is Whitsun week, while this day and the next two constitute Whitsuntide.
Trinity Sunday	Eight weeks after Easter. Sacred to the Holy Trinity consisting of the Father, Son and Holy Ghost.

MALBAR HILL,
BOMBAY:
September, 1912.

M. P. Khareghat.

Note:—The Hindi; Marwadi and Punjabi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika* or *Dvitiya*. In the Krishnadi mode reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha* then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Pakhsha of the *Shuddha*.

July, August and September, 1847.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika* or *Dvitiya*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha* then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Pakhsha of the *Shuddha*.

October, November and December, 1852.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Vija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1855.

Note:—The Hindu, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha.

V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon.

S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon.

* This sign shows the commencement of a new year.

April, May and June, 1858.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Vija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1858.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

January, February and March, 1861.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika* In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1863.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan &c begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *A dhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1866.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon S shows Shudy or Shukal Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika* as in the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* fall. in the middle of the *Shudaha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1869.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha.

V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon.

S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon.

* This sign shows the commencement of a new year

July, August and September, 1871.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1871.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan &c. begin with the first day of the Shukla Paksha.

V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon.

S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon.

* This sign shows the commencement of a new year.

July, August and September, 1874.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1874.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon.* This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1877.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

January, February and March, 1880.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan &c. begin with the first day of the Shukla Paksha.

V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon.

S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon.

* This sign shows the commencement of a new year.

July, August and September, 1880.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. ` This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1882.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1885.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1888.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1890.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

† At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1893.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha.

V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon.

S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon.

* This sign shows the commencement of a new year.

April, May and June, 1896.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha V shows Vady or Krishna Paksha*i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year

At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Paksha of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1896.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year

At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Paksha of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

January, February and March, 1899.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vaiy or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika* In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Paksha of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1901.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Paksha of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1904.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha *i. e* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July August and September, 1907.

Note.—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha.

V shows Vady or Krishna Paksha *i.e.* the dark half or decrease of the Moon.

S shows Sudy or Shukla Paksha *i. e.* the bright half or increase of the Moon.

* This sign shows the commencement of a new year.

July, August and September, 1909.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1909.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

†At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla &

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e* the bright half or increase of the Moon. * This sign shows the commencement of a new year

‡At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vadyr or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year

‡At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

January, February and March, 1918.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

†At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e* the bright half or increase of the Moon. * This sign shows the commencement of a new year

‡At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1923.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

‡At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1926.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

‡At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha* *i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1928.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

†At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1931.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

†At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha.

V shows Vady or Krishna Paksha *i. e.* the dark half or decrease of the Moon.

S shows Shudy or Shukla Paksha *i. e.* the bright half or increase of the Moon.

* This sign shows the commencement of a new year.

July, August and September, 1936.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those o: Cujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

‡At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1936.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

†At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

October, November and December, 1939.

Note:—The Hindi, Punjabi and Marwadi months begin with the first day of the Krishna Paksha, while those of Gujarat, Deccan, &c. begin with the first day of the Shukla Paksha. V shows Vady or Krishna Paksha, *i. e.* the dark half or decrease of the Moon. S shows Shudy or Shukla Paksha, *i. e.* the bright half or increase of the Moon. * This sign shows the commencement of a new year.

†At several places the ordinary month is called *Nija* or *Shuddha* and the additional one *Adhika*. In the Krishnadi mode of reckoning (Upper India and Punjab excepting Rajputana) the *Adhika* falls in the middle of the *Shuddha i. e.* first the Krishna Paksha of the *Shuddha*, then the Shukla & Krishna Pakshas of the *Adhika*, and lastly the Shukla Paksha of the *Shuddha*.

July, August and September, 1942.
